

M&A Technology Launches Genius Station, an Interactive Instructional Platform for Education

Dallas, TX February 6, 2013 --M&A Technology, a leading provider of technology solutions for K-12, will debut the mobile and interactive **Genius Station™** at **TCEA 2013** conference in Austin, Texas (booth #938). The Genius Station offers the first true mobile platform for teachers to deliver interactive and engaging presentations without the costly and time consuming installation of A/V equipment in the classroom. The Genius Station integrates seamlessly with student devices allowing the teacher to control, select and share the student's work with the class.

"We believe the mobile and interactive Genius Station will revolutionize 21st century learning with its feature rich and cutting edge technology that encourages collaboration between students and teachers in the classroom", said Donna Shepard, Executive Vice President at M&A Technology.

The mobile and interactive Genius Station was developed to eliminate the excessive cost of installing and managing the traditional deployment of audio-visual tools in the classroom. It also offers an easy to use interface for teachers to switch between multiple sources of content and video with a click of a button. The 24" multi-touch surface allows the teacher to easily annotate on the screen eliminating the need for interactive whiteboards. The annotation software also allows the teacher to annotate on Power Point and PDF files.

In Summary, the Genius Station offers a unique platform for teachers to deliver content rich presentations and reduces the total cost of ownership. The school administrators can easily deploy and train the teachers on the Genius Station making it a key element of the 21st century interactive classroom. To learn more about Genius Station please visit us at www.geniusstation.com. It's simply genius!
